

Assessments & Planning – Case Study

BUILDING SECURITY MINDED ORGANIZATIONS

Background

A merger was underway between two large organizations in the southeast. The resulting company, with combined revenues in excess of \$3B, was working through the effort to combine and consolidate various aspects of the new shared organization. The Vice President of Information Technology had concerns about the design and structure of the new shared cybersecurity department.

Solution

Meeting with business and technology leaders from both legacy organizations, North Wonders facilitated the conversations and collaboration necessary to draft planning documents for the new, combined security department. Additionally, a comprehensive planning document was created allowing the department to prioritize current security initiatives, merger related activities, as well as efforts needed to implement the new shared security department.

Outcome

Presented combined assessment, planning, and roadmap documents to leadership. Leadership’s testimonial stated that the documents provided a “concise and clear road map for our security program.” The company immediately began implementing strategic and tactical tasks shown in these documents.

North Wonders was retained to provide extended leadership coaching to the organ-
